

Journal Report 2

9/9/19-9/15/19

Abby Kim

Computer Systems Research Lab

Period 2, White

Daily Log

Monday September 9

I read the two articles and they turned out to be really helpful so I understand the 3 output files now. The one part I couldn't figure out was how all the token IDs reference each other (but that was a Thursday problem).

Tuesday September 10

I drew stuff on the board about what makes a word. I kind of just thought about what Word2Vec is and then read an article explaining it. I won't be implementing this for a while, but I really wanted to know what it is.

Thursday September 12

This was by far my most productive day. I drew on the white board again, and for some reason, white boards really make my thoughts clear. I basically took a sentence or phrase, traced through the token references by hand, then annotated each word. I then figured out an algorithm to code that will bucket the words properly.

Timeline

Date	Goal	Met
Last Week	"This week I want to read the two articles and understand the book.id.book file."	Yes!!
This Week	Implement the algorithm I drew up. I'm kind of bad at coding so there will probably be a lot of bugs so this might take a lot of time.	N/A
Today plus 1 week	Figure out the next part of the algorithm regarding filtering out characters by gender and implement it	N/A
Today plus 2 weeks	Graph the data points generated from the previous week and see what it looks like. (This seems simple but I'm also really bad at math so this will probably take a week)	N/A

Reflection

So, it was a pretty good week. White boards just make thoughts make sense. Now that I actually understand what every output file means, I can start coding things.

I got to be real and let you know I really don't know what I'm doing but I'm just hoping things will work out in the end. Anyways, I attached the white boards because that's basically what I did this week.
